CISC-19 - CBROPS - UNDERSTANDING CISCO CYBERSECURITY OPERATIONS FUNDAMENTALS V1.2

Categoria: **Cisco**

INFORMAZIONI SUL CORSO

Durata:	Categoria:	Qualifica Istruttore:	Dedicato a:	Produttore:
5 Giorni	Cisco	Cisco Certified Instructor	Professionista IT	Cisco

OBIETTIVI

After completing this course you should be able to:

- Explain how a SOC operates and describe the different types of services that are performed from a Tier 1 SOC analyst's perspective
- Explain the use of SOC metrics to measure the effectiveness of the SOC
- Explain the use of a workflow management system and automation to improve the effectiveness of the SOC
- Describe the Windows operating system features and functionality
- Provide an overview of the Linux operating system
- Understand common endpoint security technologies
- Explain the network security monitoring (NSM) tools that are available to the network security analyst
- Describe security flaws in the TCP/IP protocol and how they can be used to attack networks and hosts
- Explain the data that is available to the network security analyst
- Describe the basic concepts and uses of cryptography
- Understand the foundational cloud security practices, including deployment and service models, shared responsibilities, compliance frameworks, and identity and access management, to effectively secure cloud environments against cyberthreats
- Understand and implement advanced network security, data protection, secure application deployment, continuous monitoring, and effective disaster recovery strategies to secure cloud deployments
- Understand the kill chain and the diamond models for incident investigations, and the use of exploit kits by threat actors
- Identify the common attack vectors
- Identify malicious activities
- Identify patterns of suspicious behaviors
- Identify resources for hunting cyber threats
- Explain the need for event data normalization and event correlation
- Conduct security incident investigations
- Explain the use of a typical playbook in the SOC
- Describe a typical incident response plan and the functions of a typical computer security incident response team (CSIRT)

PREREQUISITI

Attendees should meet the following prerequisites:

-Familiarity with Ethernet and TCP/IP networking

-Working knowledge of the Windows and Linux operating systems

-Familiarity with basics of networking security concepts

Recommended prerequisites:

-CCNA - Implementing and Administering Cisco Solutions

CONTENUTI

Defining the Security Operations Center

-Types of Security Operations Centers

-SOC Analyst Tools

-Data Analytics

-Hybrid Installations: Automated Reports, Anomaly Alerts

-Staffing an Effective Incident Response Team

-Roles in a Security Operations Center

-Developing Key Relationships with External Resources

Understanding SOC Metrics

-Security Data Aggregation

-Time to Detection

-Security Controls Detection Effectiveness

-SOC Metrics

Understanding SOC Workflow and Automation

-SOC WMS Concepts

-Incident Response Workflow

-SOC WMS Integration

-DevSecOps in Cybersecurity

-Automate Security in CI/CD Pipelines

-DevSecOps for Cloud-Native and Containerized Environments

-SecOps Collaboration and DevSecOps Culture

-SOC Workflow Automation Example

Understanding Windows Operating System Basics (Self-Study)

-Windows Operating System History

-Windows Operating System Architecture

-Windows Processes, Threads and Handles

-Windows Virtual Memory Address Space

-Windows Services

-Windows File System Overview

-Windows File System Structure

-Windows Domains and Local user Accounts

-Windows GUI

-Run as Administrator

-Windows CLI

-Windows Powershell
-Windows net Command
-Controlling Startup Services and Executing System shutdown
-Controlling Services and Processes
-Monitoring System Resources
-Windows Boot Process
-Windows Networking
-Windows netstat Command
-Accessing Network Resources with Windows
-Windows Registry
-Windows Management Instrumentation
-Common Windows Server Functions
-Common Third-Party Tools
-Lab Set-up Video: Explore the Windows Operating System

Understanding Linux Operating System Basics (Self-Study)

-History and Benefits of Linux
-Linux Architecture
-Linux File System Overview
-Basic File System Navigation and Management Commands
-File Properties and Permissions
-Editing File Properties
-Root and Sudo
-Disks and File Systems
-System Initialization
-Emergency/Alternate Startup Options
-Shutting Down the System
-System Processes
-Interacting with Linux
-Linux Command Shell Concepts
-Piping Command Output
-Other Useful Command-Line Tools
-Overview of Secure Shell Protocol
-Networking
-Managing Services in SysV Environments
-Viewing Running Network Services
-Name Resolution: DNS
-Testing Name Resolution
-Viewing Network Traffic
-Configuring Remote Syslog
-Running Software on Linux
-Executables vs Interpreters
-Using Package Managers to Install Software in Linux
-System Applications
-Lightweight Directory Access Protocol
-Lab Set-Up Video: Explore the Linux Operating System

Understanding Endpoint Security Technologies

-Host-Based Personal Firewall
-Signature-Based and Rule-Based Monitoring
-Monitor Netowrk Traffic and the Endpoint Level
-Predictive AI in Endpoint Security Monitoring
-AI-Driven Behavioral Analysis for Threat Detection
-Machine Learning Technologies in Host-Based Monitoring
-Cisco ML-and AI-Powered Security Solutios
-Host-Based Antivirus
-Host Intrusion Prevention System
-Application Allowed Lists and Blocked Lists
-Host-Based Malware Protection
-Sandboxing
-File Integrity Checking
-Lab Set-Up Video: Explore Endpoint Security
-Secure Virtualized Environements
-Conainer Security Fundamentals
-Monitor and Protect Container Workloads
-Best Security Practices for Hybrid Environments

Understanding Network Infrastructure and Network Security Monitoring Tools

-NAT Fundamentals
-Packet Filtering with ACLs
-ACLs with the Established Option
-Access Control Models
-Authentication, Authorization and Accounting
-Load Balancing
-Network-Based Malware Protection
-Network Security Monitoring Tools

Understanding Common TCP/IP Attacks

-Address Resolution Protocol
-Legacy TCP/IP Vulnerabilties
-IP Vulnerabilities
-ICMP Vulnerabilities
-TCP Vulnerabilities
-UDP Vulnerabilities
-Attack Surface and Attack Vectors
-Reconnaissance Attacks
-Access Attacks
-Man-in-the-Middle Attacks
-Denial of Service and Distributed Denial of Service
-Reflection and Amplification Attacks
-Spoofing Attacks
-DHCP Attacks

Exploring Data Type Categories

-Network Security Monitoring Data Types
-Security Onion Overview

-Full Packet Capture
-Packet Captures
-Packet Capture Using Tcpdump
-Session Data
-Transaction Data
-Alert data
-Other Data Types
-Correlating NSM Data
-Information Security Confidentiality, Integrity and Availability
-Personally Identifiable Information
-Regulatory Compliance
-Intellectual Property

Understanding Basic Cryptography Concepts

-Impact of Cryptography on Security Investigations
-Cryptography Overview
-Hash Algorithms
-Encryption Overview
-Cryptanalysis
-Symmetric Encryption Algorithms
-Asymmetric Encryption Algorithms
-Diffie-Helman Key Agreement
-Use Case: SSH
-Digital Signatures
-PKI Overview
-PKI Operations
-Use Case: SSL/TLS
-Cipher Suite
-Key Management
-NSA Suite B

Cloud Security Fundamentals

-Cloud Deployment and Service Models
-Shared Responsibility Model in Cloud Security
-Cloud Security Frameworks and Compliance
-Identity and Access Management in Cloud Environments

Securing Cloud Deployments

-Network Security in Cloud Environments
-Data Protection in the Cloud
-Secure Cloud Workload and Applications
-Cloud Monitoring, Logging and Incident Response
-Threat Detection and Vulnerability Management in the Cloud
-Disaster Recovery and Business Continuity in the Cloud

Understanding Incident Analysis in a Threat-Centric SOC

-Classic Kill Chain Model Overview
-Social Engineering Attack Vectors

-Generative AI in Social Engineering
-Detecting and Mitigating Social Engineering Threats
-Kill Chain Phase 1: Reconnaissance
-Kill Chain Phase 2: Weaponization
-Kill Chain Phase 3: Delivery
-Kill Chain Phase 4: Exploitation
-Kill Chain Phase 5: Installation
-Kill Chain Phase 6: Command-and-Control
-Kill Chain Phase 7: Actions on Objectives
-Applying the Kill Chain Model
-Diamond Model Overview
-Applying the Diamond Model
-MITRE ATTACK Framework

Identifying Common Attack Vectors

-DNS Operations
-Dynamic DNS
-Recursive DNS Query
-HTTP Operations
-HTTPS Operations
-HTTP/2 Operations
-SQL Operations
-SMTP Operations
-Web Scripting
-Obfuscated JavaScript
-Shellcode and Exploits
-Common Metasploit Payloads
-Directory Traversal
-SQL Injection
-Cross-Site Scripting
-Punycode
-DNS Tunneling
-Pivoting
-HTTP 302 Cushioning
-Gaining Access Via Web-Based Attacks
-Exploit Kits
-Emotet Advanced Persistant Threat

Identifying Malicious Activity

-Understanding the Network Design
-Zero Trust Model
-Identifying Possible Threat Actors
-Log Data Search
-System Logs
-Windows Event Viewer
-Firewall Log
-DNS Log
-Web Proxy Log

-Email Proxy Log
-AAA Server Log
-Next Generation Firewall Log
-Application Log
-NetFlow
-NetFlow as a Security Tool
-Network Behavior Anomaly Detection
-Data Loss Detection Using NetFlow example
-DNS Risk and Mitigation Tool
-IPS Evasion Techniques
-The Onion Router
-Gaining Access and Control
-Peer-to-Peer Networks
-Encapsulation
-Altered Disk Image

Identifying Patterns of Suspicious Behavior

-Network Baselining
-Identifying Anomalies and Suspicious Behaviors
-PCAP Analysis
-Delivery

Identifying Resources for Hunting Cyber Threats

-Cyber-Threat Hunting Concepts
-Hunting Maturity Model
-Cyber Threat Hunting Cycle
-Common Vulnerability Scoring System
-CVSS v3.0 Scoring
-CVSS v3.0 Example
-Hot Threat Dashboard
-Publicly Available Threat Awareness Resources
-Other External Threat Intelligence Sources and Feed Reference
-Security Intelligence
-Threat Analytic Systems
-Security Tools Reference

Understanding Event Correlation and Normalization

-Event Sources
-Implementing SIEM Solutions for Effective Security Monitoring
-SOAR Platform Overview
-Cisco XDR Platform Overview
-Integrating XDR,SIEM, and SOAR for SOC Efficiency
-Evidence
-Chain of Custody
-Security Data Normalization
-Event Correlation
-Other Security Data Manipulation

Conducting Security Incident Investigations

- -Security Incident Investigation Procedures
- -Threat Investigation Example: China Chopper Remote Access Trojan

Using a Playbook Model to Organize Security Monitoring

- -Security Analytics
- -Playbook Definition
- -What is a Play?
- -Playbook Management System

Describing Incident Response

- -Incident Response Planning
- -Incident Response Life Cycle
- -Incident Response Policy Elements
- -Incident Attack Categories
- -Reference US-CERT Incident Categories
- -Regulartory Compliance Incident Response Requirements
- -CSIRT Categories
- -CSIRT Framework
- -CSIRT Incident Handling Services

Labs

- -Discovery Lab 1: Use NSM Tools to Analyze Data Categories
- -Discovery Lab 2: Explore Cryptographic Technologies
- -Discovery Lab 3: Explore TCP/IP Attacks
- -Discovery Lab 4: Explore Endpoint Security
- -Discovery Lab 5: Investigate Hacker Methodology
- -Discovery Lab 6: Hunt Malicious Traffic
- -Discovery Lab 7: Correlate Event Logs, PCAPs, and Alerts of an Attack
- -Discovery Lab 8: Investigate Browser-Based Attacks
- -Discovery Lab 9: Analyze Suspicious DNS Activity
- -Discovery Lab 10: Explore Security Data for Analysis
- -Discovery Lab 11: Investigate Suspicious Activity Using Security Onion
- -Discovery Lab 12: Investigate Advanced Persistent Threats
- -Discovery Lab 13: Explore SOC Playbooks
- -Discovery Lab 14: Explore the Windows Operating System
- -Discovery Lab 15: Explore the Linux Operating System

INFO

Esame: 200-201 - Understanding Cisco Cybersecurity Operations Fundamentals
Materiale didattico: Materiale didattico ufficiale Cisco in formato digitale
Costo materiale didattico: incluso nel prezzo del corso a Calendario
Natura del corso: Operativo (previsti lab su PC)
