ODAT-7 - ORACLE AI DATABASE: PERFORMANCE MANAGEMENT AND TUNING

Categoria: **Database**

INFORMAZIONI SUL CORSO

Durata:	Categoria:	Qualifica Istruttore:	Dedicato a:	Produttore:
5 Giorni	Database	Oracle Certified Professional	Professionista IT	Oracle

OBIETTIVI

PREREQUISITI

CONTENUTI

1: Overview

- -Objectives 1-2
- -What is performance management? 1-3
- -Who manages performance? 1-4
- -What does the DBA tune? 1-5
- -Types of Tuning 1-6
- -Tuning Methodology 1-7
- -Effective Tuning Goals 1-9
- -General Tuning Session 1-11
- -Tuning a CDB 1-13
- -Performance Tuning: Diagnostics 1-14
- -Performance Tuning: Features and Tools 1-15
- -Tuning Objectives 1-16
- -Summary 1-17

2: Defining the Scope of Performance Issues

- -Objectives 2-2
- -Defining the Problem 2-3
- -Limit the Scope 2-4
- -Determining Tuning Priorities 2-5
- -Common Tuning Problems 2-6
- -Tuning Life Cycle Phases 2-8
- -Tuning During the Life Cycle 2-9
- -Application Design and Development 2-10

-Testing: Database Configuration 2-11
-Deployment 2-12
-Production 2-13
-Migration, Upgrade, and Environment Changes 2-14
-ADDM Tuning Session 2-15
-Performance Versus Business Requirements 2-16
-Monitoring and Tuning Tools: Overview 2-17
-Summary 2-19

3: Using the Time Model to Diagnose Performance Issues
-Objectives 3-2
-Time Model: Overview 3-3
-DB Time 3-4
-CPU and Wait Time Tuning Dimensions 3-5
-Time Model Statistics Hierarchy 3-6
-Time Model: Example 3-8
-Top Timed Events 3-9
-Summary 3-10

4: Using Statistics and Wait Events to Diagnose Performance Issues
-Objectives 4-2
-Dynamic Performance Views 4-3
-Dynamic Performance Views: Usage Examples 4-4
-Dynamic Performance Views: Considerations 4-5
-Statistic Levels 4-6
-Instance Activity and Wait Event Statistics 4-8
-System Statistic Classes 4-9
-Displaying Statistics 4-10
-Displaying SGA Statistics 4-11
-Wait Events 4-12
-Using the V$EVENT_NAME View 4-13
-Wait Classes 4-14
-Displaying Wait Event Statistics 4-15
-Commonly Observed Wait Events 4-17
-Using the V$SESSION_WAIT View 4-18
-Precision of System Statistics 4-19
-Summary 4-20

5: Using Log and Trace Files to Monitor Performance
-Objectives 5-2
-Viewing the Alert Log 5-3
-Using Alert Log Information as an Aid in Managing Performance 5-5
-Administering the DDL Log File 5-6
-Understanding the Debug Log File 5-7
-User Trace Files 5-8
-Background Processes Trace Files 5-9
-Summary 5-10

6: Using Enterprise Manager Cloud Control and SQL Developer to Monitor Performance
-Objectives 6-2
-Enterprise Manager: Overview 6-3
-Oracle Enterprise Manager Cloud Control Components 6-4
-Using Features of the Oracle Management Packs and Options 6-5
-Oracle SQL Developer 6-6
-SQL Developer Command Line (SQLcl) 6-7
-Summary 6-8

7: Using Statspack to View Performance Data
-Objectives 7-2
-Introduction to Statspack 7-3
-Statspack Scripts 7-4
-Installing Statspack 7-6
-Capturing Statspack Snapshots 7-7
-Configuring Snapshot Data Capture 7-8
-Statspack Snapshot Levels 7-9
-Statspack Baselines and Purging 7-11
-Reporting with Statspack 7-12
-Statspack Considerations 7-13
-Statspack Reports 7-14
-Reading a Statspack Report 7-15
-Statspack Report Drilldown Sections 7-16
-Report Drilldown Examples 7-18
-Load Profile Section 7-19
-Time Model Section 7-20
-Statspack and AWR 7-21
-Summary 7-22

8: Using Automatic Workload Repository
-Objectives 8-2
-Automatic Workload Repository: Overview 8-3
-Automatic Workload Repository Data 8-4
-Workload Repository 8-5
-AWR Administration 8-6
-AWR Snapshot Purging Policy 8-7
-Managing Snapshots with PL/SQL 8-8
-AWR Snapshot Settings 8-9
-Manual AWR Snapshots 8-10
-Managing AWR Data in a Multitenant Environment 8-11
-AWR Snapshots and ADDM in a Multitenant Architecture Database 8-12
-Generating AWR Reports 8-13
-Reading the AWR Report 8-14
-AWR Report: Multitenant Data 8-15
-Generating AWR Reports by Using SQL*Plus 8-16
-Statspack and AWR Reports 8-17
-Reading a Statspack or an AWR Report 8-18
-Compare Periods: Benefits 8-19

-Snapshots and Periods Comparisons 8-20
-Compare Periods: Results 8-21
-Compare Periods: Report 8-22
-Multitenant AWR Views 8-23
-Summary 8-24

9: Using Metrics and Alerts
-Objectives 9-2
-Metrics and Alerts 9-3
-Limitation of Base Statistics 9-4
-Typical Delta Tools 9-5
-Oracle Database Metrics 9-6
-Benefits of Metrics 9-7
-Viewing Metric History Information 9-8
-Viewing Metric Details 9-9
-Statistics Histograms 9-10
-Histogram Views 9-11
-Server-Generated Alerts 9-12
-Alert Usage Model 9-13
-Metric and Alert Views 9-14
-Summary 9-15

10: Using Baselines
-Objectives 10-2
-Comparative Performance Analysis with AWR Baselines 10-3
-Automatic Workload Repository Baselines 10-4
-AWR Baselines 10-5
-Types of Baselines 10-6
-Moving Window Baseline 10-7
-Baseline Templates 10-8
-Creating AWR Baselines 10-9
-Creating a Single AWR Baseline 10-10
-Creating a Repeating Baseline and Template 10-11
-Managing Baselines by Using the DBMS_WORKLOAD_REPOSITORY Package 10-12
-Generating a Baseline Template for a Single Time Period 10-13
-Creating a Repeating Baseline Template 10-14
-Baseline Views 10-15
-Performance Monitoring and Baselines 10-16
-Summary 10-17

11: Managing Automated Maintenance Tasks
-Objectives 11-2
-Automated Maintenance Tasks 11-3
-Maintenance Windows 11-5
-Default Maintenance Plan 11-6
-Automated Maintenance Task Priorities 11-7
-Configuring Automated Maintenance Tasks 11-8
-Summary 11-9

12: Using ADDM to Analyze Performance
-Objectives 12-2
-ADDM Performance Monitoring 12-3
-ADDM and Database Time 12-4
-DB Time-Graph and ADDM Methodology 12-5
-Top Performance Issues Detected 12-7
-ADDM Recommendations 12-8
-Creating a Manual ADDM Task 12-9
-ADDM Tasks in a Multitenant Architecture Database 12-10
-Changing ADDM Attributes 12-11
-Retrieving ADDM Reports by Using SQL 12-12
-Compare Period ADDM: Analysis 12-13
-Workload Compatibility 12-14
-Configuring Automatic ADDM Analysis at the PDB Level 12-15
-Using the DBMS_ADDM Package to Compare Periods 12-16
-Example: Using the DBMS_ADDM Package to Compare Periods 12-17
-Summary 12-18

13: Using Active Session History Data for First Fault System Analysis
-Objectives 13-2
-Active Session History: Overview 13-3
-Active Session History: Mechanics 13-4
-ASH Sampling: Example 13-5
-Accessing ASH Data 13-6
-Analyzing the ASH Data 13-7
-Using Enterprise Manager to View ASH Analysis 13-8
-Using Enterprise Manager to Generate ASH Reports 13-9
-Using the ASH Report Script to Generate a Report 13-10
-ASH Report Structure 13-11
-Determining the Source of Data 13-12
-Performing Skew Analysis 13-13
-Additional Automatic Workload Repository Views 13-14
-Summary 13-15

14: Using Emergency Monitoring and Real-Time ADDM to Analyze Performance Issues
-Objectives 14-2
-Emergency Monitoring: Challenges 14-3
-Emergency Monitoring: Goals 14-4
-Using Real-Time ADDM to Perform a Root Cause Analysis 14-5
-Using Real-Time ADDM 14-6
-Real-Time ADDM in the Database 14-8
-Using Real-Time ADDM 14-10
-Viewing Real-Time ADDM Results 14-11
-Summary 14-12

15: Overview of SQL Statement Processing
-Objectives 15-2

-SQL Statement Processing Phases 15-3
-Parsing 15-4
-SQL Cursor Storage 15-5
-Session Cursor Cache 15-6
-Cursor Usage and Parsing 15-7
-SQL Statement Processing Phases: Bind 15-8
-SQL Statement Processing Phases: Execute and Fetch 15-9
-Processing a DML Statement 15-10
-Commit Processing 15-12
-Identifying Poorly Performing SQL Statements 15-13
-Top SQL Reports 15-14
-SQL Monitoring 15-15
-Monitored SQL Execution Details 15-16
-Summary 15-17

16: Maintaining Indexes
-Objectives 16-2
-Creating Indexes 16-3
-Using Invisible and Unusable Indexes 16-4
-Dropping Indexes 16-5
-Reducing the Cost of SQL Operations 16-6
-Index Maintenance 16-7
-Using Advanced Index Compression 16-9
-Other Index Options 16-10
-SQL Access Advisor 16-11
-Automatic Indexing Task 16-12
-Automatic Index Task Workflow 16-14
-Automatic Indexing Task Reporting 16-16
-Automatic Indexing Views 16-18
-Summary 16-19

17: Maintaining Tables
-Objectives 17-2
-Reducing the Cost of SQL Operations 17-3
-Table Maintenance for Performance 17-4
-Table Reorganization Methods 17-5
-Space Management 17-6
-Extent Management 17-7
-Locally Managed Extents 17-8
-Large Extents: Considerations 17-9
-How Table Data Is Stored 17-11
-Anatomy of a Database Block 17-12
-Minimizing Block Visits 17-13
-Block Allocation 17-14
-Free Lists 17-15
-Block Space Management 17-16
-Block Space Management with Free Lists 17-17
-Automatic Segment Space Management 17-19

-Automatic Segment Space Management at Work 17-20
-Block Space Management with ASSM 17-21
-Creating an Automatic Segment Space Management Segment 17-22
-Migration and Chaining 17-23
-Guidelines for PCTFREE and PCTUSED 17-25
-Detecting Migration and Chaining 17-26
-Selecting Migrated Rows 17-27
-Eliminating Migrated Rows 17-28
-Shrinking Segments: Overview 17-30
-Shrinking Segments: Considerations 17-31
-Shrinking Segments by Using SQL 17-32
-Segment Shrink: Basic Execution 17-33
-Segment Shrink: Execution Considerations 17-34
-Data Compression 17-35
-Advanced Row Compression: Overview 17-37
-Advanced Row Compression: Concepts 17-38
-Using Advanced Row Compression 17-39
-Advanced Row Compression for DML Operations 17-40
-Advanced Index Compression 17-41
-How does Hybrid Columnar Compression work? 17-42
-Using the Compression Advisor 17-43
-Using the Compression Advisor for Indexes 17-44
-Viewing Table Compression Information 17-45
-Summary 17-46

18: Introduction to Query Optimizer
-Objectives 18-2
-Role of the Oracle Optimizer 18-3
-Functions of the Query Optimizer 18-5
-Selectivity 18-7
-Cardinality and Cost 18-8
-Changing Optimizer Behavior 18-9
-Setting and Viewing Optimizer Parameters 18-11
-Using Initialization Parameters to Control Optimizer Behavior 18-12
-Enabling Query Optimizer Features 18-14
-Influencing the Optimizer Approach 18-15
-Optimizing SQL Statements 18-16
-Access Paths 18-17
-Choosing an Access Path 18-18
-Summary 18-19

19: Understanding Execution Plans
-Objectives 19-2
-What is an execution plan? 19-3
-Methods for Viewing Execution Plans 19-4
-Uses of Execution Plans 19-5
-DBMS_XPLAN Package: Overview 19-6
-EXPLAIN PLAN Command 19-8

-EXPLAIN PLAN Command: Example 19-9
-EXPLAIN PLAN Command: Output 19-10
-Reading an Execution Plan 19-11
-Using the V$SQL_PLAN View 19-12
-Querying V$SQL_PLAN 19-13
-V$SQL_PLAN_STATISTICS View 19-14
-Querying the AWR 19-15
-SQL*Plus AUTOTRACE 19-16
-Using SQL*Plus AUTOTRACE 19-17
-SQL*Plus AUTOTRACE: Statistics 19-18
-Adaptive Execution Plans 19-19
-Dynamic Plans 19-20
-Dynamic Plan: Adaptive Process 19-21
-Dynamic Plans: Example 19-22
-Continuous Adaptive Query Plans 19-23
-Automatic Re-Optimization 19-24
-Comparing Execution Plans 19-25
-Summary 19-26

20: Viewing Execution Plans by Using SQL Trace and TKPROF
-Objectives 20-2
-SQL Trace Facility 20-3
-How to Use the SQL Trace Facility 20-5
-Initialization Parameters 20-6
-Enabling SQL Trace 20-8
-Disabling SQL Trace 20-9
-Formatting Your Trace Files 20-10
-TKPROF Command Options 20-11
-Output of the TKPROF Command 20-13
-TKPROF Output with No Index: Example 20-18
-TKPROF Output with Index: Example 20-19
-Generating an Optimizer Trace 20-20
-Summary 20-21

21: Managing Optimizer Statistics
-Objectives 21-2
-Optimizer Statistics 21-3
-Types of Optimizer Statistics 21-4
-Optimizer Statistics Collection 21-5
-Dynamic Statistics 21-7
-Gathering Statistics and Setting Optimizer Statistics Preferences 21-8
-Setting Statistic Preferences 21-9
-Viewing and Managing Optimizer Statistics Preferences 21-11
-Extended Statistics 21-12
-Maintaining Optimizer Statistics 21-13
-Automated Maintenance Tasks 21-14
-Optimizer Statistics Advisor 21-15
-Optimizer Statistics Advisor Report 21-16

-Executing Optimizer Statistics Advisor Tasks 21-17
-Restoring Statistics 21-18
-Deferred Statistics Publishing: Overview 21-19
-Deferred Statistics Publishing: Example 21-21
-Managing Real-Time Statistics 21-22
-Configuring High-Frequency Automatic Optimizer Statistics Collection 21-23
-Summary 21-24

22: Using Automatic SQL Tuning
-Objectives 22-2
-Automatic SQL Tuning: Overview 22-3
-SQL Statement Profiling 22-4
-Plan Tuning Flow and SQL Profile Creation 22-5
-SQL Tuning Loop 22-6
-Using SQL Profiles 22-7
-Summary 22-8

23: Using the SQL Plan Management Feature
-Objectives 23-2
-SQL Plan Management: Overview 23-3
-SQL Plan Baseline: Architecture 23-4
-Loading SQL Plan Baselines 23-5
-Loading SQL Plan Baselines from AWR 23-6
-Evolving SQL Plan Baselines 23-7
-Important SQL Plan Baseline Attributes 23-8
-SQL Plan Selection 23-9
-Possible SQL Plan Manageability Scenarios 23-11
-SQL Performance Analyzer and SQL Plan Baseline Scenario 23-12
-Loading a SQL Plan Baseline Automatically 23-13
-Purging SQL Management Base Policy 23-14
-Enterprise Manager and SQL Plan Baselines 23-15
-Automatic SQL Plan Management 23-16
-SPM Evolve Advisor 23-19
-Summary 23-24

24: Overview of the SQL Advisors
-Objectives 24-2
-SQL Tuning Process 24-3
-SQL Tuning Advisor: Overview 24-4
-SQL Access Advisor: Overview 24-6
-SQL Performance Analyzer: Overview 24-7
-Summary 24-9

25: Using the SQL Tuning Advisor
-Objectives 25-2
-SQL Tuning Advisor: Overview 25-3
-SQL Tuning Advisor Architecture 25-5
-Automatic Tuning Optimizer 25-6

-Using the SQL Tuning Advisor 25-7
-SQL Tuning Advisor Options 25-8
-SQL Tuning Advisor Recommendations 25-9
-Alternative Execution Plans 25-10
-Summary 25-12

26: Using the SQL Access Advisor
-Objectives 26-2
-SQL Access Advisor: Overview 26-3
-Using the SQL Access Advisor 26-4
-Viewing Recommendations 26-5
-Viewing Recommendation Details 26-6
-Practice Overview 26-7
-Summary 26-8

27: Overview of Real Application Testing Components
-Objectives 27-2
-Real Application Testing: Overview 27-3
-Real Application Testing: Use Cases 27-5
-Summary 27-6

28: Using SQL Performance Analyzer to Determine the Impact of Changes
-Objectives 28-2
-SQL Performance Analyzer: Process 28-3
-Steps 6–7: Comparing/Analyzing Performance and Tuning Regressed SQL 28-5
-Capturing the SQL Workload 28-6
-Creating a SQL Performance Analyzer Task 28-7
-SQL Performance Analyzer Task Page 28-9
-SQL Performance Analyzer Comparison Report 28-10
-SQL Performance Analyzer: PL/SQL Example 28-11
-Tuning Regressed SQL Statements 28-13
-SQL Performance Analyzer: Data Dictionary Views 28-14
-Summary 28-15

29: Using Database Replay to Test System Performance
-Objectives 29-2
-Using Database Replay 29-3
-The Big Picture 29-4
-System Architecture: Capture 29-5
-System Architecture: Processing the Workload 29-7
-System Architecture: Replay 29-8
-Database Replay Workflow in Enterprise Manager 29-9
-Accessing Database Replay in Enterprise Manager 29-10
-Capture Considerations 29-11
-Replay Considerations: Preparation 29-13
-Replay Considerations 29-14
-Replay Customized Options 29-15
-Replay Analysis 29-16

-Database Replay Packages 29-18
-Data Dictionary Views: Database Replay 29-19
-Database Replay: PL/SQL Example 29-20
-Calibrating Replay Clients 29-22
-Capturing and Replaying in a CDB and PDBs 29-23
-Reporting 29-24
-Summary 29-26

30: Implementing Real-Time Database Operation Monitoring
-Objectives 30-2
-Overview 30-3
-Use Cases 30-4
-Defining a DB Operation 30-5
-Scope of a Composite DB Operation 30-6
-Database Operation Concepts 30-7
-Identifying a Database Operation 30-8
-Enabling Monitoring of Database Operations 30-9
-Identifying, Starting, and Completing a Database Operation 30-10
-Monitoring Database Operations in Sessions 30-11
-Monitoring the Progress of a Database Operation 30-12
-Monitoring SQL Operation Details 30-13
-Database Operation View: V$SQL_MONITOR 30-14
-Database Operation Views 30-15
-Reporting Database Operations by Using Functions 30-16
-Database Operation Tuning 30-17
-Summary 30-18

31: Using Services to Monitor Applications
-Objectives 31-2
-What is a service? 31-3
-Service Attributes 31-4
-Service Types 31-5
-Creating Services 31-6
-Using the DBMS_SERVICE Package to Manage Services 31-7
-Where are services used? 31-8
-Using Services with Client Applications 31-9
-Using Services with the Resource Manager 31-10
-Using Enterprise Manager to Manage Consumer Group Mappings 31-11
-Services and the Resource Manager: Example 31-12
-Using Enterprise Manager to Create a Job Class 31-13
-Using Enterprise Manager to Create a Job 31-14
-Services and the Scheduler: Example 31-15
-Using Services with Metric Thresholds 31-16
-Using Enterprise Manager to Change Service Thresholds 31-17
-Services and Metric Thresholds: Example 31-18
-Service Aggregation and Tracing 31-19
-Services Statistics in Performance Home Page 31-20
-Top Services Statistics Using ASH Analytics Performance Page 31-21

-Service Aggregation Configuration 31-22
-Service Aggregation: Example 31-23
-Client Identifier Aggregation and Tracing 31-24
-Using the TRCSESS Utility 31-25
-Service Performance Views 31-26
-Summary 31-28

32: Overview of Memory Structures
-Objectives 32-2
-Managing Memory Caches and Structures 32-3
-Guidelines for Efficient Memory Usage 32-4
-Unified Memory 32-6
-Summary 32-9

33: Managing Shared Pool Performance
-Objectives 33-2
-Shared Pool Architecture 33-3
-Shared Pool Operation 33-4
-Library Cache 33-5
-Latch and Mutex 33-7
-Latch and Mutex: Views and Statistics 33-9
-Diagnostic Tools for Tuning the Shared Pool 33-11
-AWR/Statspack Indicators 33-13
-Top Timed Events 33-14
-Time Model 33-15
-Load Profile 33-16
-Instance Efficiencies 33-17
-Library Cache Activity 33-18
-Avoid Hard Parses 33-19
-Are cursors being shared? 33-20
-Candidate Cursors for Sharing 33-21
-Sharing Cursors 33-22
-Adaptive Cursor Sharing: Example 33-24
-Adaptive Cursor Sharing Views 33-26
-Interacting with Adaptive Cursor Sharing 33-27
-Reducing the Cost of Soft Parses 33-28
-Sizing the Shared Pool 33-29
-Shared Pool Advisory 33-30
-Shared Pool Advisory in an AWR Report 33-31
-Shared Pool Advisor 33-32
-Avoiding Fragmentation 33-33
-Large Memory Requirements 33-34
-Tuning the Shared Pool Reserved Pool 33-36
-Keeping Large Objects 33-38
-Data Dictionary Cache 33-40
-Dictionary Cache Misses 33-41
-SQL Query Result Cache: Overview 33-42
-Managing the SQL Query Result Cache 33-43

-Using the RESULT_CACHE Hint 33-45
-Using Table Annotation to Control Result Caching 33-46
-Using the DBMS_RESULT_CACHE Package 33-47
-Viewing SQL Result Cache Dictionary Information 33-48
-SQL Query Result Cache: Considerations 33-49
-Summary 33-50

34: Managing Buffer Cache Performance
-Objectives 34-2
-Buffer Cache: Highlights 34-3
-Database Buffers 34-4
-Buffer Hash Table for Lookups 34-6
-Working Sets 34-7
-Tuning Goals and Techniques 34-9
-Symptoms of a Buffer Cache Issue 34-11
-Cache Buffer Chains Latch Contention 34-12
-Finding Hot Segments 34-13
-Buffer Busy Waits 34-14
-Buffer Cache Hit Ratio 34-15
-Buffer Cache Hit Ratio is Not Everything 34-16
-Interpreting Buffer Cache Hit Ratio 34-17
-Read Waits 34-18
-Free Buffer Waits 34-19
-Solutions for Buffer Cache Issues 34-20
-Sizing the Buffer Cache 34-21
-Buffer Cache Size Parameters 34-22
-Dynamic Buffer Cache Advisory Parameter 34-23
-Buffer Cache Advisory View 34-24
-Using the V$DB_CACHE_ADVICE View 34-25
-Using the Buffer Cache Advisor 34-26
-Caching Tables 34-27
-Automatic Big Table Caching 34-28
-Configuring Automatic Big Table Caching 34-29
-Using Automatic Big Table Caching 34-30
-Monitoring Automatic Big Table Caching 34-31
-Memoptimized Rowstore 34-32
-In-Memory Hash Index 34-33
-Multiple Buffer Pools 34-34
-Enabling Multiple Buffer Pools 34-35
-Calculating the Hit Ratio for Multiple Pools 34-36
-Multiple Block Sizes 34-37
-Multiple Database Writers 34-38
-Multiple I/O Slaves 34-39
-Using Multiple Writers and I/O Slaves 34-40
-Private Pool for I/O-Intensive Operations 34-41
-Automatically Tuned Multiblock Reads 34-42
-Database Smart Flash Cache Overview 34-43
-Using Database Smart Flash Cache 34-44

-Database Smart Flash Cache Architecture: Overview 34-45
-Configuring Database Smart Flash Cache 34-46
-Sizing Database Smart Flash Cache 34-47
-Enabling and Disabling Flash Devices 34-48
-Specifying Database Smart Flash Cache for a Table 34-49
-Full Database In-Memory Caching 34-50
-Setting Up Force Full Database Caching 34-51
-Monitoring Full Database In-Memory Caching 34-52
-Flushing the Buffer Cache (for Testing Only) 34-53
-Summary 34-54
-Practice Overview 34-55

35: Managing PGA and Temporary Space Performance
-Objectives 35-2
-SQL Memory Usage 35-3
-Performance Impact 35-4
-Automatic PGA Memory 35-5
-SQL Memory Manager 35-6
-Configuring Automatic PGA Memory 35-8
-Setting PGA_AGGREGATE_TARGET Initially 35-9
-Limiting the Size of the Program Global Area 35-10
-Managing the PGA for PDBs 35-11
-Monitoring SQL Memory Usage 35-12
-Monitoring SQL Memory Usage: Examples 35-14
-Tuning SQL Memory Usage 35-15
-PGA Target Advice Statistics 35-16
-PGA Target Advice Histograms 35-17
-Automatic PGA and Enterprise Manager 35-18
-Automatic PGA and AWR Reports 35-19
-Temporary Tablespace Management: Overview 35-20
-Temporary Tablespace: Locally Managed 35-21
-Configuring Temporary Tablespace 35-22
-Temporary Tablespace Group: Overview 35-24
-Temporary Tablespace Group: Benefits 35-25
-Creating Temporary Tablespace Groups 35-26
-Maintaining Temporary Tablespace Groups 35-27
-Viewing Tablespace Groups 35-28
-Monitoring Temporary Tablespace 35-29
-Shrinking a Temporary Tablespace 35-30
-Using the Tablespace Option When Creating a Temporary Table 35-31
-Summary 35-32

36: Configuring the Large Pool
-Objectives 36-2
-Large Pool Overview 36-3
-Tuning the Large Pool 36-4
-Summary 36-5

37: Using Automatic Shared Memory Management

-Objectives 37-2
-Oracle Database Architecture 37-3
-Granules 37-4
-Automatic Shared Memory Management: Overview 37-5
-SGA Sizing Parameters: Overview 37-6
-Dynamic SGA Transfer Modes 37-7
-Memory Broker Architecture 37-8
-Manually Resizing Dynamic SGA Parameters 37-9
-Behavior of Auto-Tuned SGA Parameters 37-10
-Behavior of Manually Tuned SGA Components 37-11
-Using the V$SYSTEM_PARAMETER View 37-12
-Resizing SGA_TARGET 37-13
-Disabling Automatic Shared Memory Management 37-14
-Using the SGA Advisor 37-15
-Monitoring ASMM 37-16
-Managing SGA for PDBs 37-17
-Summary 37-18

38: Introduction to In-Memory Column Store

-Objectives 38-2
-Database In-Memory Feature Set 38-3
-Goals of In-Memory Column Store 38-5
-Benefits 38-7
-Overview 38-8
-Row Store Versus Column Store: 2D Vision 38-10
-In-Memory Column Unit 38-11
-Compare: In-Memory Column Store Cache and Buffer Cache 38-12
-Dual Format In-Memory 38-13
-Indexes Issues 38-14
-Process 38-15
-In-Memory Column Store: Dual Format of Segments in SGA 38-16
-Using OEM to Manage In-Memory Pool 38-17
-Summary 38-18

39: Configuring the In-Memory Column Store Feature

-Objectives 39-2
-Deploying IM Column Store 39-3
-Using OEM to Manage In-Memory Pool 39-4
-Deploying IM Column Store: Objects Setting 39-5
-Deploying IM Column Store: Columns Setting 39-6
-Defining IM Column Store Compression 39-7
-In-Memory Advisor 39-8
-IM Advisor or Compression Advisor? 39-9
-Computing Compression Ratio 39-10
-IM FastStart 39-11
-Automatic In-Memory: Overview 39-12
-AIM Action 39-13

-Configuring Automatic In-Memory 39-14
-Diagnostic Views 39-15
-Summary 39-16

40: Using the In-Memory Column Store Feature to Improve SQL Performance

-Objectives 40-2
-Query Benefits 40-3
-Testing and Comparing Query Performance 40-4
-Queries on In-Memory Tables: Simple Predicate 40-5
-MINMAX Pruning Statistics 40-6
-IM Column Store Statistics 40-7
-Execution Plan: TABLE ACCESS IN MEMORY FULL 40-8
-Queries on In-Memory Tables: Join 40-9
-Execution Plan: JOIN FILTER CREATE / USE 40-10
-Queries on In-Memory Tables: Join Groups 40-11
-Population of Expressions and Virtual Columns Results 40-12
-In-Memory Expression Unit (IMEU) 40-14
-Populating In-Memory Expression Results 40-15
-Populating In-Memory Expression Results Within a Window 40-16
-Waiting for In-Memory Segments to Be Populated 40-17
-Views 40-18
-Summary 40-19

41: Using In-Memory Column Store with Oracle Database Features

-Objectives 41-2
-Interaction with Other Products 41-3
-Optimizer 41-4
-IM Column Store and Real Application Clusters 41-6
-IM Column Store and Data Pump 41-7
-Data Pump TRANSFORM Names 41-8
-Automatic Data Optimization Interaction 41-9
-Managing Heat Map and Automatic Data Optimization Policies 41-10
-Creating ADO In-Memory Policies 41-11
-Summary 41-12

INFO

Materiale didattico: Materiale didattico ufficiale Oracle in formato digitale
Costo materiale didattico: incluso nel prezzo del corso a Calendario
Natura del corso: Operativo (previsti lab su PC)
